PROFESSIONAL SUMMARY

Software Quality Analyst and AI-focused developer with 4+ years of experience building test automation frameworks, agentic AI tools, and full-stack applications. Currently shipping production-grade QA automation at Allegion while independently developing open-source tools powered by LLMs, agentic workflows, and Discord integrations. Hands-on with Claude Code, Cursor, OpenAI APIs, and MCP servers — comfortable working across the full stack from CI/CD pipelines to React Native mobile apps. Driven by a genuine interest in using AI to automate real problems, not just talk about it.

WORK EXPERIENCE

Allegion | Indianapolis, IN | Contract

Oct 2024 – Present

Software Quality Analyst

- Built Command Central independently — an internal tool that parses Teams meeting transcripts and auto-generates Azure DevOps work items, schedules follow-up meetings, and tracks sprint-based releases on a live dashboard. Extended it with role-based AI kit views so QAs, BAs, and developers each get a tailored experience within the same tool.
- Contributed as the first beta tester for the team's QA AI Kit (powered by Claude Code) — added skills, refined context handling, and validated outputs through iterative testing cycles, directly shaping features that drove adoption across the QA team.
- Migrated test automation from Testim.io to Playwright, writing scripts tied into Azure DevOps CI/CD pipelines to maintain regression coverage across 3 applications and 15 environments (Dev, QA, UAT, Production).
- Owned QA across 3 internal applications — writing test plans, running manual and automated tests, and participating in sprint and story planning each release cycle.
- Managed DevOps workflows in Azure DevOps — reviewed and merged PRs, promoted commits across environments, and configured pipelines and test suites.
- Took on client-facing responsibilities alongside regular QA duties — handled issue triage and stakeholder communication without any disruption to delivery.

Tritech Software | Hyderabad, India | Full-time

Jan 2021 – Jul 2022

Software Development Engineer in Test

- Built a web-based dynamic form builder using HTML, CSS3, and JavaScript with object-to-XML conversion, enabling flexible data capture across internal applications.
- Developed and enhanced features across multiple internal software applications, coordinating with an external QA team to validate releases and maintain product quality.
- Wrote Python scripts to automate repetitive workflows, improving team efficiency and reducing manual effort across development processes.
- Debugged and resolved production issues and performance bottlenecks across internal systems, reducing recurring incidents through root cause analysis and targeted fixes.
- Participated in company-wide security audits and supported the security team in responding to unauthorized access incidents and documenting network configurations.

Empiezo IT Solutions | Hyderabad, India | Internship

Jun 2019 – May 2020

Software Developer Intern

- Collaborated with a team of 4 interns to design and build Python-based applications from the ground up, taking shared ownership of architecture decisions and delivery.
- Built ML-based prediction and analysis models using public datasets across healthcare, finance, and agriculture domains — including crop yield prediction, liver anomaly detection, and stock market analysis.
- Contributed to feature development on existing applications, working alongside senior developers to understand codebases, fix bugs, and ship enhancements.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, HTML5, CSS3

Frameworks & Libraries: React, React Native, Angular, Node.js, Express.js, MERN Stack, MEAN Stack, Bootstrap

Testing & QA: Playwright, Testim, Selenium, Postman, Cypress, BrowserStack, JUnit, TestNG, Mocha, Jest — Regression, BVT, Smoke, UAT, API Testing, End-to-End Testing

CI/CD & DevOps: Azure DevOps (ADO), Jenkins, Docker, Git, GitHub, GitHub Actions, CI/CD Pipelines, Sealights

Cloud & Databases: AWS (EC2, S3, RDS, Lambda), Firebase, MySQL, PostgreSQL, MongoDB

AI & Agentic Development: OpenAI API, Claude Code, MCP Servers, Agentic Workflows, AI Agent Building, Generative AI, Large Language Models (LLM), Machine Learning, TensorFlow, PyTorch, NLP

Developer Tools: Cursor, Windsurf, GitHub Copilot, n8n, Ollama, Figma

PROJECTS

Helix — *Open Source* | github.com/vamshivittali76/helix-job-automation

A Discord bot that automates the job search process — scrapes listings, uses AI to tailor applications to individual job descriptions, tracks application status, and sends real-time alerts. Built to solve a real problem and fully open source.

Stack: Python, Ollama, OpenAI API, Discord API.

Tokie — *Open Source* | *In Development*

A local-first CLI and dashboard that tracks token usage and quota windows across every AI subscription you pay for — normalizes Claude Code, Cursor, Codex, and direct APIs into one view and recommends which tool to use next when you're close to a limit.

Stack: Python, FastAPI, SQLite, HTMX, MCP.

Quest Log — <https://github.com/vamshivittali76/QuestLog>

A gamified productivity tracker built in React Native / Expo — RPG-styled pixel-art UI with a full game loop including quests, XP, levels, coins, streaks, cosmetics, achievements, and an animated quest map.

Stack: React Native, Expo SDK, TypeScript, NativeWind, Reanimated 4.

EDUCATION

Stevens Institute of Technology, Hoboken, NJ Jan 2023 – May 2024

Master of Science (M.S.), Computer Software Engineering

Jawaharlal Nehru Technological University, Hyderabad, India Aug 2018 – Sep 2022

Bachelor of Technology (B.Tech), Computer Science and Engineering
